

# Package ‘OhdsiRTools’

November 16, 2021

**Type** Package

**Title** Tools Used by Observational Health Data Science and Informatics (OHDSI)

**Version** 2.0.0

**Date** 2021-11-16

**Maintainer** Martijn Schuemie <schuemie@ohdsi.org>

## Description

Includes functions to format and check syntax of R code and packages following the 'OHDSI' R style guidelines. Generate renv lock files for OHDSI study packages.

**License** Apache License 2.0

**Imports** remotes,  
codetools,  
formatR,  
RJSONIO,  
httr (>= 1.3.1),  
methods,  
utils

**Suggests** renv

**URL** <http://ohdsi.github.io/OhdsiRTools/>, <https://github.com/OHDSI/OhdsiRTools>

**BugReports** <https://github.com/OHDSI/OhdsiRTools/issues>

**NeedsCompilation** no

**RoxygenNote** 7.1.2

**Encoding** UTF-8

## R topics documented:

checkUsagePackage . . . . .	2
createRenvLockFile . . . . .	3
findNonAsciiStringsInFolder . . . . .	4
fixHadesLogo . . . . .	4
formatRFile . . . . .	5
formatRFolder . . . . .	5
formatRText . . . . .	6
getCorePackages . . . . .	6
getOhdsiGitHubPackages . . . . .	7
insertEnvironmentSnapshotInPackage . . . . .	7

restoreEnvironment . . . . .	8
restoreEnvironmentFromPackage . . . . .	9
restoreEnvironmentFromPackageOnGithub . . . . .	10
takeEnvironmentSnapshot . . . . .	11
updateCopyrightYearFile . . . . .	11
updateCopyrightYearFolder . . . . .	12
updatePackageName . . . . .	12
updatePackageNameFolder . . . . .	12

---

checkUsagePackage	<i>Check all code in a package</i>
-------------------	------------------------------------

---

## Description

Check all code in a package

## Usage

```
checkUsagePackage(
  package,
  ignoreHiddenFunctions = TRUE,
  suppressBindingKeywords = c("ggplot2", "ffwhich", "subset.ffdf", "glm")
)
```

## Arguments

package	The name of the package to check.
ignoreHiddenFunctions	Ignore functions for which the definition cannot be retrieved?
suppressBindingKeywords	A set of keywords that are indicative of non-standard evaluation.

## Details

This function uses the codetools package to check the code from problems. Heuristics are used to eliminate false positives due to non-standard evaluation.

## Examples

```
checkUsagePackage("OhdsiRTools")
```

---

createRenvLockFile	Create a renv lock file
--------------------	-------------------------

---

## Description

Create a renv lock file

## Usage

```
createRenvLockFile(  
  rootPackage,  
  mode = "auto",  
  includeRootPackage = TRUE,  
  additionalRequiredPackages = NULL,  
  ohdsiGitHubPackages = getOhdsiGitHubPackages(),  
  ohdsiStudiesGitHubPackages = rootPackage,  
  fileName = "renv.lock"  
)
```

## Arguments

rootPackage	The name of the root package, the package that we'd like to be able to run in the end.
mode	Can be "auto" or "description". See details.
includeRootPackage	Include the root package in the renv file?
additionalRequiredPackages	Additional packages we want to have installed (with their dependencies), such as 'keyring'. Ignored if mode = "auto".
ohdsiGitHubPackages	Names of R packages that need to be installed from the OHDSI GitHub.
ohdsiStudiesGitHubPackages	Names of R packages that need to be installed from the OHDSI-Studies GitHub.
fileName	Name of the lock file to be generated. Ignored if mode = "auto".

## Details

Create a lock file that allows reconstruction of the R environment using the renv package. This function will include the root file and all of its dependencies in the lock file, requiring the same package versions as currently installed on this computer.

If mode = "auto", this function will invoke `renv::init()`, which in turn will scan the project folders for any dependencies that are referenced. Afterwards, references to OHDSI packages will be altered so the correct GitHub tags are used for the installed versions.

If mode = "description", this function will assume the project is a full-fledged R package with up-to-date DESCRIPTION, and will only install the dependencies listed in the DESCRIPTION.

The second option tends to lead to smaller lock files, but requires all dependencies are accurately listed in the DESCRIPTION file of the study package.

**Value**

Does not return a value. Is executed for the side-effect of creating the lock file.

---

```
findNonAsciiStringsInFolder
```

*Find non-ASCII strings in files*

---

**Description**

Find non-ASCII string in files

**Usage**

```
findNonAsciiStringsInFolder(path = ".", recursive = TRUE, pattern = "*.R$")
```

**Arguments**

path	Path to the folder containing the files matching the pattern parameter.
recursive	If TRUE, subfolders will also be searched for files matching the pattern parameter.
pattern	The regular expression to use for selecting files. The default is .R files.

**Value**

A table listing the lines per file containing non-ASCII characters.

---

```
fixHadesLogo
```

*Fix HADES logo in pkgdown output*

---

**Description**

In all HTML files in the docs folder, each occurrence of 'hadesLogo' is replaced with an HTML image tag referring to the HADES logo.

**Usage**

```
fixHadesLogo(path = ".")
```

**Arguments**

path	Path to the root of the package for which the pkgdown output needs to be fixed.
------	---

**Value**

This function returns nothing.

---

formatRFile	<i>Format an R file</i>
-------------	-------------------------

---

**Description**

Format an R file

**Usage**

```
formatRFile(file, width.cutoff = 100)
```

**Arguments**

file	The path to the file.
width.cutoff	Number of characters that each line should be limited to.

**Details**

DEPRECRATED. Please use `styler::style_file` instead.

---

formatRFolder	<i>Format all R files in a folder</i>
---------------	---------------------------------------

---

**Description**

Format all R files in a folder

**Usage**

```
formatRFolder(path = ".", recursive = TRUE, skipAutogenerated = TRUE, ...)
```

**Arguments**

path	Path to the folder containing the files to format. Only files with the .R extension will be formatted.
recursive	Include all subfolders?
skipAutogenerated	Skip auto-generated files such as RcppExports.R?
...	Parameters to be passed on the the formatRFile function

**Details**

DEPRECRATED. Please use `styler::style_dir` instead.

---

formatRText	<i>Format R code</i>
-------------	----------------------

---

**Description**

Format R code

**Usage**

```
formatRText(text, width.cutoff = 100)
```

**Arguments**

text	A character vector with the R code to be formatted.
width.cutoff	Number of characters that each line should be limited to.

**Details**

DEPRECATED. Please use `styler::style_text` instead.

**Value**

A character vector with formatted R code.

---

getCorePackages	<i>Get a list of R core packages</i>
-----------------	--------------------------------------

---

**Description**

Get a list of R core packages

**Usage**

```
getCorePackages()
```

**Details**

Returns names of packages that are part of the R code, and can therefore not be installed.

**Value**

A character vector.

---

`getOhdsiGitHubPackages`*Get a list of packages in the OHDSI GitHub.*

---

**Description**

Get a list of packages in the OHDSI GitHub.

**Usage**

```
getOhdsiGitHubPackages()
```

**Details**

Returns names of packages that need to be installed from <https://github.com/ohdsi>.

**Value**

A character vector.

---

`insertEnvironmentSnapshotInPackage`*Store snapshot of the R environment in the package*

---

**Description**

Store snapshot of the R environment in the package

**Usage**

```
insertEnvironmentSnapshotInPackage(  
  rootPackage,  
  pathToCsv = "inst/settings/rEnvironmentSnapshot.csv"  
)
```

**Arguments**

<code>rootPackage</code>	The name of the root package
<code>pathToCsv</code>	The path for saving the snapshot (as CSV file).

**Details**

This function records all versions used in the R environment that are used by one root package, and stores them in a CSV file in the R package that is currently being developed. The default location is `inst/settings/rEnvironmentSnapshot.csv`. This can be used for example to restore the environment to the state it was when a particular study package was run using the [restoreEnvironment](#) function.

## Examples

```
## Not run:
insertEnvironmentSnapshotInPackage("OhdsiRTools")

## End(Not run)
```

---

restoreEnvironment	<i>Restore the R environment to a snapshot</i>
--------------------	--

---

## Description

Restore the R environment to a snapshot

## Usage

```
restoreEnvironment(
  snapshot,
  stopOnWrongRVersion = FALSE,
  strict = FALSE,
  skipLast = TRUE
)
```

## Arguments

snapshot	The snapshot data frame as generated using the <a href="#">takeEnvironmentSnapshot</a> function.
stopOnWrongRVersion	Should the function stop when the wrong version of R is installed? Else just a warning will be thrown when the version doesn't match.
strict	If TRUE, the exact version of each package will installed. If FALSE, a package will only be installed if (a) a newer version is required than currently installed, or (b) the major version number is different.
skipLast	Skip last entry in snapshot? This is usually the study package that needs to be installed manually.

## Details

This function restores the R environment to a previous snapshot, meaning all the packages will be restored to the versions they were at at the time of the snapshot. Note: on Windows you will very likely need to have RTools installed to build the various packages.

## Examples

```
## Not run:
snapshot <- takeEnvironmentSnapshot("OhdsiRTools")
write.csv(snapshot, "snapshot.csv")

# 5 years later

snapshot <- read.csv("snapshot.csv")
```

```
restoreEnvironment(snapshot)

## End(Not run)
```

---

```
restoreEnvironmentFromPackage
```

*Restore environment stored in package*

---

## Description

Restore environment stored in package

## Usage

```
restoreEnvironmentFromPackage(  
  pathToCsv = "inst/settings/rEnvironmentSnapshot.csv",  
  stopOnWrongRVersion = FALSE,  
  strict = FALSE,  
  skipLast = TRUE  
)
```

## Arguments

pathToCsv	The path for saving the snapshot (as CSV file).
stopOnWrongRVersion	Should the function stop when the wrong version of R is installed? Else just a warning will be thrown when the version doesn't match.
strict	If TRUE, the exact version of each package will be installed. If FALSE, a package will only be installed if (a) a newer version is required than currently installed, or (b) the major version number is different.
skipLast	Skip last entry in snapshot? This is usually the study package that needs to be installed manually.

## Details

This function restores all packages (and package versions) described in the environment snapshot stored in the package currently being developed. The default location is `inst/settings/rEnvironmentSnapshot.csv`.

## Examples

```
## Not run:  
restoreEnvironmentFromPackage()  
  
## End(Not run)
```

---

```
restoreEnvironmentFromPackageOnGithub
```

*Restore environment stored in package*

---

## Description

Restore environment stored in package

## Usage

```
restoreEnvironmentFromPackageOnGithub(
  githubPath,
  pathToCsv = "inst/settings/rEnvironmentSnapshot.csv",
  stopOnWrongRVersion = FALSE,
  strict = FALSE,
  skipLast = TRUE
)
```

## Arguments

githubPath	The path for the GitHub repo containing the package (e.g. 'OHDSI/StudyProtocols/AlendronateVsRa
pathToCsv	The path for the snapshot inside the package.
stopOnWrongRVersion	Should the function stop when the wrong version of R is installed? Else just a warning will be thrown when the version doesn't match.
strict	If TRUE, the exact version of each package will installed. If FALSE, a package will only be installed if (a) a newer version is required than currently installed, or (b) the major version number is different.
skipLast	Skip last entry in snapshot? This is usually the study package that needs to be installed manually.

## Details

This function restores all packages (and package versions) described in the environment snapshot stored in the package currently being developed. The default location is `inst/settings/rEnvironmentSnapshot.csv`.

## Examples

```
## Not run:
restoreEnvironmentFromPackageOnGithub("OHDSI/StudyProtocols/AlendronateVsRaloxifene")

## End(Not run)
```

---

`takeEnvironmentSnapshot`*Take a snapshot of the R environment*

---

**Description**

Take a snapshot of the R environment

**Usage**

```
takeEnvironmentSnapshot(rootPackage)
```

**Arguments**

`rootPackage`      The name of the root package

**Details**

This function records all versions used in the R environment that are used by one root package. This can be used for example to restore the environment to the state it was when a particular study package was run using the [restoreEnvironment](#) function.

**Value**

A data frame listing all the dependencies of the root package and their version numbers, in the order in which they should be installed.

**Examples**

```
snapshot <- takeEnvironmentSnapshot("OhdsiRTools")
snapshot
```

---

`updateCopyrightYearFile`*Update the copyright year in a R or SQL file*

---

**Description**

Update the copyright year in a R or SQL file

**Usage**

```
updateCopyrightYearFile(file)
```

**Arguments**

`file`              The path to the file.

---

updateCopyrightYearFolder

*Update the copyright year in all R and SQL files in a folder*

---

### Description

Update the copyright year in all R and SQL files in a folder

### Usage

```
updateCopyrightYearFolder(path = ".", recursive = TRUE)
```

### Arguments

path	Path to the folder containing the files to update. Only files with the .R and .SQL extension will be updated.
recursive	Include all subfolders?

---

updatePackageName

*Update the package name in a R or SQL file*

---

### Description

Update the package name in a R or SQL file

### Usage

```
updatePackageName(file, packageName)
```

### Arguments

file	The path to the file.
packageName	The replacement package name

---

updatePackageNameFolder

*Update the package name in all R and SQL files in a folder*

---

### Description

Update the package name in all R and SQL files in a folder

### Usage

```
updatePackageNameFolder(path = ".", packageName, recursive = TRUE)
```

**Arguments**

path	Path to the folder containing the files to update. Only files with the .R and .SQL extension will be updated.
packageName	The replacement package name
recursive	Include all subfolders?
